CH. DAMIEN'S SYSTEM.

FRENCH IN THREE MONTHS!

REVISED EDITION, 1902.

We have much pleasure in recommending the above work.

The booklet contains the three thousand words, and idioms, which are most used in ordinary conversation; sufficient to enable you to talk French all your life; no fossil philological peculiarities, but French as it is actually spoken in France. Grammar underlies each group of examples, and we think this a cleverly condensed method of teaching the French language.

The Author of French in Three Months also gives Lessons in Conversational French to adults, at

128, CROMWELL ROAD, LONDON, S.W.; AND
64, ROSSLYN HILL, HAMPSTEAD, N.W.

Friends of the Ed. of this Magazine can testify to his ability and agreeable way of teaching.

The Magnetic Nerve Invigorator Co.,

THE EARTH.

THE ROTATION OF THE EARTH:
HOW TO OBSERVE IT!

Extracts from an Address given by LADY BLOUNT, at Hampton Place, Brighton, on April 19th, 1903.

An article with a similar heading to the above appears in the March number of Past and Future. This journal is described, on its title page, as "a monthly journal of the Second Advent, and investigations concerning Biblical Chronological, Astronomical, and Historical subjects."

With the hope of the Second Advent we entirely agree, and with the investigation of the other subjects mentioned we are also in harmony. But we want those subjects investigated in a reasonable and Scriptural manner. The editor of the paper professes to uphold Bible teaching, and for the greater part he does so on Chronology and historical subjects. But on astronomical subjects and Bible Cosmogony we believe he is entirely astray, and leading others astray in helping to support the infidel science of the day. He upholds the doctrine of a whirling globe, flying through so-called "space" faster than a flash of lightning.

How the Lord will return to such a flying ball the editor does not trouble to explain, much less how the holy city—the New Jerusalem—will "come down from heaven" to rest upon any particular locality of such a madly whirling sphere! But these things he perhaps regards as trifles compared with the question of the time it takes this cannon-like ball to go through its various evolutions, flying now east and then, without any adequate cause, turning back in its so-called orbit, and shooting west.

It is not often that first-rate astronomers try to prove the earth's motions; but occasionally some of their disciples will try their hands at it. Mr. Dimbleby goes a point further and tells his readers "how to observe the rotation of the
This is a very desirable exercise, and it will be interesting to the readers of *The Earth*, as well as the readers of *Past and Future* to watch such an interesting proceeding.

He begins by saying:—

"Planetary motion has now become such an interesting part of astronomy for the purpose of measurement, that there need be no surprise that many persons study it diligently. One of these motions, and one by which Biblical history is so clearly proved, is the rotation of the earth in twenty-four hours. This may be witnessed by observing the following explanations."

From this paragraph it would appear that the readers of *Past and Future* are treated to a novel way of observing the earth's motions. They are invited to do so "by observing the following explanations!" Of course, Mr. D. should know the capacities of his readers better than we do; for our part we should be inclined to give them credit for a clearer perception than is implied in the above paragraph. We think they will be able to see at least some slight difference between watching "the rotation of the earth," and simply "observing the following explanations!" At all events we know that Zetetics are gifted with sufficient perception to see through this evasion, as I shall now proceed to show.

But before doing so I wish to state that I am fully persuaded that Mr. Dimbleby does not uphold error wilfully. He begins by saying:—

"The Polar star never moves. It is like a nail driven in the sky! But all the other stars revolve round it in circles according to their distance. The stars near it move round it in small circles, whilst those more distant travel in larger circles. Observing these facts, we notice that the Polar star is not in the Zenith overhead, but about 45 degrees below the surface."

This paragraph is in the editor's usual style. He is always giving "reasons" to his readers why certain appearances are seen in the heavens, and why they should not believe in the reality of these appearances. Perhaps his readers are docile enough to accept all these "explanations" in a becoming spirit of humility, since they are propounded with such assurance and authority. But we are afraid that our Zetetic readers are not so docile, and they would ask us some troublesome questions if we were to "reason" in this manner.

For instance we are told that the "Pole star never moves," but "all the other stars revolve round it in circles!"; and that because the other stars revolve around the Polar star this is a "proof" that the Earth revolves upon its "axis"! So that the way to observe the "rotation of the Earth" according to Mr. D., is to watch the stars revolve about the pole star! This is a very pretty proof indeed.

It almost seems like an oversight on the part of the astronomers that they have not more vigorously taken up this simple proof; it would save them from going about with long pendulums, and watching them swing, and altering their planes of vibration. But the stars of the Great Bear have one advantage over the swinging of the pendulum, i.e., they always go round in the same direction, while the pendulum is not so amenable to the exigencies of astronomical theories, for it has been known on more than one occasion to alter the plane of its vibration in the wrong direction! So that the editor of *Past and Future* scores one over orthodox astronomers in sticking to the tail of the Great Bear.

Again, we are gravely informed that "because the pole of the earth's equator revolves round the pole of the ecliptic this is a proof that the stars do not revolve round the earth, but that the circles in which they move round the northern pole are formed by the rotation of the Earth on its axis. This is the same as saying that because the stars revolve around the Earth therefore they do not revolve but the Earth rotates on its axis! If such "reasoning" be
acceptable to the readers of *Past and Future* it must be because their eyes have been blinded, like the editor's, to its absurdity, to say nothing of the unscripturalness, of the globular theory. It is "reasoning" in a circle as it is called, and simply leaves you where you began.

However good a chronologer the writer may be he is evidently deficient in the logical faculty, but though a man may be deficient in this, one would think that he might at least be guided by the Bible. But if a man start unknowingly from detective premises he may be led to draw false conclusions, and it also appears that he may persist in advancing these false conclusions, as though they were the truth. We know no other way of accounting for the following assertions made by this writer; and we offer this as the most charitable "explanation" we can think of under the circumstances, believing that the writer means to be honest.

It is therefore from no personal motive we thus speak, but the truth requires of us plain speaking when the veracity of the Word of God is the question at issue. We are informed that:

"If we fix a telescope between two stone pillars so that it cannot deviate a hair's breadth to the right or left of the meridian line, although it may be moved upwards or downwards upon it, we shall soon find that any star which crosses the centre of the object glass at the same instant as the sun will cross it on the following day 3 minutes and 56 seconds before the sun. This can only occur in consequence of the rotation of the earth being 23 hours, 56 minutes, and 4 seconds."

This looks like a deliberate statement, and any Zetetic knows it is not true. We can hardly believe that the editor is ignorant that there is another and more feasible explanation, namely, that it could occur by the stars moving round the earth in about four minutes less time than the sun goes his daily round. We believe that the stars do so move, but the question here is not whether the stars do so move or not, but whether there is any other explanation possible of the phenomenon referred to? We know there is another and a more plausible explanation, and we think Mr. D. ought to know; yet he says: "this can only occur in consequence of the rotation of the earth!" We leave it with our readers, and conclude with one more specimen of the unreliable nature of his repeated and dogmatic assertions.

He says: "We are assured that Scripture teaches us what

the Works of God also prove, that the earth rotates on its axis, and also travels in an annual orbit round the sun." In answer to this we need only quote one or two Scripture passages, such as the Creator's question to Job: "Where wast thou when I laid the foundations of the earth? Whereupon were the foundations (margin, sockets) thereof fastened? or who laid the corner stone thereof."—*Job* xxxviii. 4–6.

But Mr. D. denies that the Earth rests on foundations at all. Nevertheless, it has foundations, for "He hath founded the earth upon her bases that it should not be moved for ever."—*Ps.* civ. 5.

No unimpeachable proof has ever been offered to the world of the earth's supposed terrible motions. The astronomers would almost give their ears for a good proof of such motions, but they cannot find one. They have the sense, however, to let the Bible alone on this point. It is only, we think, the false friends of the Bible who attempt to make it harmonize with the doctrines of modern theoretical astronomy.

We know that practical investigation has proved the Earth to be as the Bible represents it, a vast plane, or series of planes. We can therefore quote with full approval Mr. D.'s closing paragraph, although of course we give it a different application: "When the first chapter of Genesis is read in the light of scientific observation, readers are obliged to admire its accuracy, but they cannot avoid smiling at the ignorance of men who assume to contradict both Scripture and science." We think that this is the only part of the article which is really true.

If Mr. Dimbleby has no proof of the rotation of the Earth better than these "explanations" it should open his eyes to the truth. If he can find a proof not vitiated by the usual underlying globular assumptions, we shall be glad to find space for it in our journal, for as we have said before we have no personal feeling in the matter; our sole object being the truth, and the glory of God as set forth in the perfect reliability of His Holy Word.
MAN'S PLACE IN THE UNIVERSE.

(continued from p. 190).

From various expressions in the article under examination, it appears that the writer is an evolutionist as well as a spiritualist, or spiritist. I mention this from no want of respect to the writer; but that we may see the standpoint from which he views the universe.

For the "development" of what he conceives to be the imperishable human soul, he assumes "infinite space and infinite time"; yet in his article he has given us no reason for believing either in one or the other. We think that the idea of "infinite space" is a fiction of the astronomers; and we know that infinite time is another.

The date of Creation is clearly intimated to those who can read the great clock-work of the universe. In fact it has been calculated from the known rates of motion of the heavenly bodies themselves. The eclipse cycles, the metonic cycle, the known periods of the transits of Venus and Mercury, with the Sothic cycle, all point backwards to the prime date of Creation well within six thousand years.

Men, ignorant of these facts, may scoff at the idea; but they cannot dislodge the sun and the moon from the firmamental heavens. But until they are dislodged, or their various movements are arrested, it is really unscientific to talk of "infinite time."

But Mr. Wallace thinks that our position in the universe lends support to the view "that the supreme purpose of this vast universe was the production and development of the living soul in the perishable body of man." It does not seem to trouble the writer that this "view" of development opposes both the Bible doctrine of a special creation, and the teaching of our blessed Lord respecting the resurrection and immortalization of the Christian's material body.

His ideas in this respect seem to be the result of that "science" which, in the above paragraph, he appears to deplore; for if his "views" of the physical universe be wrong he cannot have rightly read the "supreme end and purpose" thereof.

This, again, shows the great importance of correct cosmological science, or knowledge. A true knowledge of the universe tends to give us a correct knowledge of the Creator; but false views of the universe may not only give us a wrong estimate of man's place in Nature, but may lead us to ignore or to deny the Creator, as such, altogether.

This is evident from the article under review. For instance, the writer incongruously speaks of those sceptics who, supposing the universe to consist of vast systems of suns filling (?) "endless space," find a difficulty in believing that the Creator (if ever He made such a conglomeration!) should have "any special interest in so degraded or imperfectly developed (!) inhabitant of one of the smaller planets attached to a second or third rate sun," such as ours is supposed to be; while in giving his own opinion, he speaks of "the development of man as a spiritual being with all his intellectual powers and moral possibilities."

The different descriptions given of man in two consecutive pages of the article is, to say the least, remarkable; and while we, as Zetetics, think neither description accurate, we believe the truth lies between them. Man by nature, as far as we have read the evidence both from the Bible and from Nature, is not "a spiritual being," but he is a material being with the possibility of spiritual aspirations and attainments. But if he would, through the knowledge of God, "attain to the divine nature," he must give heed to the Word of the Creator, and to the message He has sent to the World through His crucified, risen, and glorified Son (2 Pet. i. 1-4.)

But as Mr. Wallace has so ably shewn, in the lengthy paragraph I quoted above, the tendency of modern astronomy, and especially of the "New Astronomy," leads not only sceptics to treat the doctrine of the Atonement with scorn, but even theologians to renounce their faith in a personal Creator, and in "the idea of a special revelation." Either then the "science" which leads to these sad results is grievously at fault, or our faith needs a thorough revision; but the pity is that so many professing Christians, as well as unreasoning sceptics, quietly assume that the so-called "science" is infallible, while cravenly yielding up their faith in a glorious and divine revelation.

Wherein, therefore, Mr. Wallace has dared to question the hypotheses of the "New Astronomy," we, as true Zetet-
ics, must say all honour to him; but as we believe he has not gone far enough nor questioned those hypotheses sufficiently, we must proceed to show wherein we think his reasoning and logic are defective.

**Star Distribution “in Space.”**

If we have erroneous ideas respecting the universe it follows that our ideas are also liable to be wrong about “man’s place” in that universe. One error is naturally the result of the other. And our complaint against most, if not all, of the writers who treat on this subject is that they quietly assume a self-evolved universe, or even “universes,” which are not true to nature nor to fact, but based merely on astronomical speculations and hypotheses. These assumptions ought to be acknowledged as such; if they are not so acknowledged it must either be because the writer is ignorant of the fact that they have been and can be called in question, or that he is not sufficiently candid to admit the hypothetical nature of the very foundation of his evolutionary system.

Some astronomers, giving the reins to their imaginations, have speculated that there are an infinite number of stars (all “sun” of course) filling what they are pleased to call “infinite space.” But infinite space never could be “filled” with anything! And however many “universes” of stars we might imagine in different parts of “infinite space,” there would always be infinite blanks beyond, which would simply recede further off as more stars were added. But the writer under review gives us good reasons for believing in “the limited extent of the universe of luminous stars.” He says:

“The total number of visible stars from the first to the ninth magnitude is about 200,000. Now if this rate of increase continued down to the seventeenth magnitude, the faintest visible in the best modern telescopes would be about 1,400 millions. But both telescopic observations and photographic charts show that there is nothing approaching this number.”

This goes to prove that the number of stars is limited; for as astronomical instruments grow more powerful there is a comparative diminution in the number of fresh stars revealed. This fact has only lately been discovered by the astronomers; but the Psalmist knew it three thousand years ago, when he wrote:—“He telleth the number of the stars; he calleth them all by their names.”—Ps. cxlxi. 4.

The fact that there are dark patches in the heavens where few, if any, stars can be seen, points to the same conclusion; and these blanks of blackness are found both north and south of the equator. We are, therefore, pleased to agree with the writer that the “stellar universe,” if we may use such a contradictory term, is strictly of “limited extent.” As Zetetics we go further, we believe that heaven above, the earth beneath, and the waters under the earth, with all that is in them, form only ONE UNIVERSE, the limitations of which are much greater than Mr. W. would allow with his astronomical ideas of immeasurable star distances.

The measurement of star distances is amongst the most delicate and delusive, and the most difficult of astronomical observations. However, perfect astronomical instruments may be, and however accurate the readings taken, we know that there are assumptions underlying the calculations made which vitiate the whole of the conclusions drawn therefrom. For no matter how carefully a base line be measured, if that base line is supposed to extend to the opposite sides of the earth’s orbit (and this “orbit” exist only in the astronomer’s imagination) how can reliance be placed upon the measurement of angles taken at the extremities of such a hypothetical base? This again shows that before we can approximately measure the distances of the stars we must first settle whether our base line is flat or spherical; and whether that base is fixed and immovable, or for ever shifting its position in an “orbit” which would be impossible to describe if subject to all the forces and all the various motions supposed to be connected therewith. Yet notwithstanding the importance of this fundamental question Mr. Wallace complacently remarks:

"In the case of the stars the base line used is the diameter of the earth’s orbit, more than one hundred and eighty millions of miles. Every six months we are at opposite ends of this base."

I think it would require six months and take a longer article than Mr. Wallace has yet written to prove the truth of the above statement. Yet if this assumption be untrue, as we contend it is, then the vast and unimaginable star
distances calculated on such assumptions fall to the ground like a house of cards! No wonder, as the writer incidentally remarks, that astronomers "for nearly two centuries" have failed to settle the question of these vast distances. His own conclusion is that we, the inhabitants of the earth, are living somewhere near the middle of the "Milky Way"; and that "our sun" is one of the central orbs of a great globular star cluster, and therefore "very near to, if not actually at the centre of the whole visible universe"!

This, certainly, is something better than the New Astronomy, with all its "unimaginable vastness of suns and systems"; but if Mr. Wallace would only start de novo, and examine in a logical and candid spirit his own "base line" we are persuaded that he would have still further to contract his ideas and bring them down to the universe of fact; a universe, limited indeed, yet grand; suitable for the abode of man whom God created in his own image, making all things in heaven and earth to subserve his welfare, that by the discipline and the trials of this life he might be led to seek after, and to attain to, that eternal life and immortality which God has promised to all them that love Him. But this brings us to the pith of the whole question, namely, "Man's Place in the Universe"; and our further remarks under this head must be reserved for part two.

(to be continued D. I.)

MONSTROUS PICTURES.

A picture is reproduced in the Weekly Dispatch from the Cunard Bulletin, March 13th, 1903, the first daily newspaper edited, printed, and published in mid-ocean on board of the ss. Campania. (See article by "B" for the picture referred to). The comments on this "original title" in the Dispatch are made from an editorial standpoint, and assert that "it seems in a curious state of incompletion, and no doubt in time will be considerably curtailed."

I suppose (fancy a Zetetic supposing! !) this uncurtailed monstrosity is of the class referred to by the late Richard A. Proctor, who says:—
form the trick on a school globe with two sticks and so practically learn the truth of the whole matter, and then decide for Truth. “The Truth shall make you free.”

“MARCONI’S TRIUMPH.—The success of Signor Marconi in bridging the Atlantic by means of wireless telegraphy has been a matter of especial interest at Dover, as it was while he was carrying out his first cross-Channel demonstration between the South Foreland Lighthouse and Boulogne that Signor Marconi made his first intimation of the possibility of transatlantic success with his system. This was in 1899, when even cross-channel wireless telegraphy was considered marvellous, so that it will be seen what strides the invention has made in three years. At the time he was experimenting at the Foreland, Signor Marconi informed a Dover correspondent, in an interview, that his only doubt concerning transatlantic wireless telegraphy was the effect of the spheroid form of the earth, but he believed he would overcome this difficulty.”—The Nottingham Evening Post.

We are pleased to know that Signor Marconi’s practical experiment has proved beyond all question that the conjectural assertion of those who proclaim the “spheroidal form of the Earth,” is only equalled by that other lie of Satan, who is the god of this present evil age,—“Ye shall not surely die.”

If the Earth be the globe it is taught to be, Signor Marconi could never have overcome the difficulty of “earth curvature,” for he knows better than I do, that “the current would have run to earth, and been lost,” and no messages could ever have been received or delivered. Punch spoke truth when he said: “Many a man with brains beneath his hat, swears the earth is round but finds it flat!”

All workings on the Earth’s surface demonstrate that the Earth is a Plane. The history of the Suez Canal proves that “the spherical form of the earth” (sea?) was the hindrance of that canal being cut before. But, as in the case of wireless telegraphy, a man arose to “overcome the difficulty,” which existed only in the minds of scientists and not on the earth or sea either. M. de Lesseps worked to a datum HORIZONTAL LINE! and proved that what Liebnitz told Louis XIV., in connection with cutting a canal to “benefit the human race” and to “cripple Holland in its trade with the East,” was absolutely true to fact and Nature. I quote it as given by Liebnitz in a Memoire to the Grande Monarque. “The statement that the level of the Red Sea is higher than that of the Mediterranean is a mere myth.”

Every practical working, and experiment, either on the Earth’s surface—such as was conducted by Professor Airey on the banks of Loch Foyle—or on water as conducted by Professor Alfred Russell Wallace, indubitably demonstrates the approximate horizontality of both Land and Sea.

In spite of these facts sailors are taught that “in Plane Sailing the portion of the Earth traversed is considered to be a PLANE SURFACE, the meridians being represented as parallel to each other, and the parallels of latitude as straight lines crossing them at right angles.” Navigation, by Rev. W. T. Read, M.A., Headmaster Thames Nautical Training College, para. 19. On page 51, under the heading, “Great Circle Sailing,” we read “recourse is had to approximate great circle sailing.” What is the result? Well—there, read it for yourself, and call it what you like—“the vessel may be said to sail upon the sides of a many sided plane figure (a polygon).” Yet our sailors are given a Mercator’s chart to practically sail their ships by! and the same book, page 32, laying down “the principles” of the chart, crams the sailor with the following: “The equator has now become a straight line.” This clearly shows that they are sailing their ships on a Flat, Level, Horizontal surface. When, we ask, will these men own the true shape of the World?

We pause here to ask if that is a true statement of natural phenomena? “The meridians have become straight lines at right angles to it, and parallel to each other.” What! on a globe? No, my friends, the dishonesty of the thing is exposed by itself; for they have just had to unroll the chart “into a Plane surface”! Then it continues, “and the parallels of latitude also straight lines everywhere equal to the equator.” Certainly they can put everything straight and yet curved. Could “learning,” so-called, go to greater lengths in deceiving people? Is not the source, aim, and results of such “learning” apparent to everyone who loves to practice truth?

J. WILLIAMS.
A DEFENCE OF PHILOSOPHIC DOUBT:
By "Rectangle."

(continued from p. 177.)

V.—PHILOLOGY.

It was formerly supposed that, as the various nations had been "evolved" from lower forms and combinations, so their language had also been evolved from the chattering of the monkey to the speech of man. "Science," has had to surrender to Bible teaching in this important matter. Not to make the subject too long, I need only quote from the Natal Advertiser, of 8th May, 1899, to show that this has been the case. In that paper a report of a lecture by the late Right Hon. Harry Escombe, Q.C., is given, in which the learned gentleman is made to say that "Philological research confirms the statement of Scripture that once upon a time the earth was of one language and one speech."

J. Urquhart, in What Are We to Believe, says:

"THE UNITY OF THE HUMAN RACE PROVED BY LANGUAGE.

"We have seen how wonderfully modern discovery and research have supported the Book of Genesis in its statement about the threefold division of our race. From the three sons of Noah originated three families, which became in the course of ages three great centres from which the nations of the earth went forth to inhabit the broad lands of the continents and to possess the islands of the sea.

"But in the account of our origin, given in Genesis, something more is implied and plainly stated. These three families are closely allied. The old race of mankind we are told, sprang from one father and mother, Adam and Eve. The second race, that which re-peopled the earth after the Flood, were all alike the offspring of Noah and his wife.

"Now, here again the Scripture, more than 3,000 years ago, pledged itself to the truth of a statement,

Agapao is Greek for 'to love'; the Hebrew is Agab.
A DEFENCE OF PHILOSOPHIC DOUBT.

Harao is Greek for 'to see'; the Hebrew is Ra'ah. Ageria is Greek for 'to collect'; the Hebrew is Agar. Nousos and Nosos mean 'sickness' in Greek, a word from which we get our medical term 'nosology.' The Hebrew sheds some light on the origin of the word, as Noosh means 'to be sick.'

"Take another ancient member of the Indo-European family—the Sanscrit. The Hebrew for 'one' is Ekhad, the Sanscrit is Eka. Ish means 'man' in Hebrew. Isha in Sanscrit is 'master,' and Ishi 'mistress.' But there are words which connect themselves with many languages, and bring the relationship close to ourselves. Take the personal pronoun 'I,' for example; the Hebrew is Ani, or Anoki. The Egyptian is Anok, the Sanscrit Aka, the Chinese ngo, the Greek Ego, the German Ich. Take the Hebrew Anak, 'to strangle,' 'to be in anguish.' To show how language

Binds us all together,

I have only to mention the Greek Anagki, or Ananki, 'necessity,' or 'straitness,' the Latin Augustus, 'strait or narrow,' the German Angst, having the sense of our own word 'anguish,' which belongs to the same family group. The Hebrew Kerem answers to our own 'horn' and the Latin Cornu. The Hebrew Makhar is the German Morgen, and our own 'morrow.' Khittah in Hebrew and 'wheat' in English have the same meaning. Parak is evidently a near relative of the Latin Frango and our own 'break.' Aker, in Hebrew, means 'to dig,' and it throws light on the Greek Ageros and the Latin Ager (both meaning 'field') and our own 'acre.' The ager and agros was the digged place, and our own 'acre' is a measure applied to cultivated land. This list does not by any means exhaust the number of words which I might produce to prove our old relationship to the Jew, the Arab, the Syrian, and the Assyrian.

(to be continued).

ADDRESS BY DR. HAUGHTON.

BIBLICAL AND PRACTICAL ASTRONOMY.

Introductory Address delivered by Dr. E. HAUGHTON.

I have much pleasure in introducing Lady Blount as the Lecturer this evening, as I am confident that she will create unflagging interest, even for those who may happen to disagree with her views; and that she will also be able to make out a case for enquiry into that aspect of modern astronomy which appears to come into collision with revealed Truth. This is not an imaginary idea; but has unfortunately proved a stumbling block to many sincere and intelligent persons by its apparent incompatibility with the actual statements found both in the Old and New Testament writings.

When I was at college, I was of course obliged to study astronomy on the usually accepted lines, and afterwards took my degree in Trinity College as Moderator in Experimental and Natural Science; but it never occurred to me at that time that most of the principles involved were assumed without adequate proof, which I have since ascertained to be the actual fact. That these views are held by persons of great learning cannot be denied, but it must be recollected that Sir Isaac Newton's views were not accepted by any University for at least 30 years after their publication, although learned men were quite as plentiful then as they have been ever since. What we want is logical induction, a faculty which many undoubtedly learned men are strangely deficient in. Without this foundation all the mathematics employed are really worse than useless. The result is a series of abstruse calculations as to the number of thousand years which must have elapsed to enable the light of stars which have burned themselves out to reach this earth in accordance with the now adopted wave theory of the transmission of light, &c. I have even heard a serious discussion at the Royal Society as to the manner in which the sun was kept warm, with which I shall not trouble, you because some of the conjectures are too absurd to repeat! It is not Newton and Copernicus that have dogmatized in the manner now customary, but very much smaller men, who think to snatch a little reputation by abusing persons much more logical than themselves.
What is most to be regretted is, that a sort of terrorism is now used to prevent so-called "science" from being criticized, as mere ridicule always frightens off most of those who are not pecuniarily interested, and an appeal to the breeches pocket does the rest. It is quite true that by the use of logarithms, co-sines, and cube roots, many an adversary has been silenced who really had much the best of the argument; but those who are fighting for the integrity and sufficiency of the Word of God are quite prepared to suffer for their convictions, as they know that those will have to do who are not willing to go with the stream.

When a subject is really understood it can be brought within the compass of ordinary common sense; but those who know themselves to have a weak case naturally take refuge in mystery. Surely it is probable that the God of all truth would not make the most splendid phenomena of nature constant object lessons against believing the evidence of our own senses. Yet this has to be done continually if we would adopt modern astronomy as a really reliable science. That the most wonderful accuracy is daily shown in the calculation of tides, eclipses, and other natural phenomena, is quite true; but the inference that such forecasts cannot be made without Pythagorean or Copernican theories is not only false, but an impudent deception, and ought not for a moment to be accepted any more than the sort of diagrams which are constantly used to illustrate popular expositions of some of the aforesaid modern theories.

Lest it might be supposed that all great men have readily accepted a philosophy so antagonistic to Holy Scripture, I will only mention the names of Goethe and Baron Humboldt, the former of whom described the Newtonian system as "that universally diffused delirium of lunatics," and the latter said that he was only hindered by his age from undertaking such a thankless task as would be the exposure of a series of delusions which were already known to such in the scientific world (or words to that effect). He was, doubtless, aware that what Newton and Copernicus merely used as a working hypothesis to explain certain observed facts, has, since their time been exalted into the region of absolute truth, even when it leads to conclusions incompatible with the Christian religion in respect to things apparently endorsed by the most unimpeachable authority. I will now call, &c.
and equivalent, in this case, to a mountain of water 189 miles high between the two towers?

It will be observed that, in the illustration, the lines are represented as going from the top of one tower to the other in a straight line, parallel to another straight line on the ocean.

It is clear that the picture and the hypothesis of a spherical Earth cannot both be right; and all our evidence goes to show that both are wrong; while a plane Earth accords with all the phenomena and agrees with all the facts.

B.

“STRETCHED OUT UPON THE WATERS.”

BY E. H. RICHES, LL.D., F.R.A.S.,
Member of the “London Mathematical Society,”
late Cantab, etc.

(continued from p. 85.)

Let BD be a small portion of the earth’s circumference whose centre of curvature is A, and consequently all the parts of this arc will be on a level. But a tangent BC meeting the vertical line AD in the point C will be the apparent level at the point B; and therefore DC is the difference between the apparent and true level at the point B.

The distance CD must be deducted from the observed height to have the true difference of level; or the differences between the distances of the two points from the surface of the earth or from the centre of curvature A. But we shall afterwards see how the correction may be avoided altogether in certain cases. To find an expression for CD we have Euclid, third book, 36th proposition, which proves that \( BC^2 = CD \times 2AD \), but since in all cases of levelling CD is exceedingly small compared with 2AD, we may safely neglect \( CD^2 \) and then

\[
\frac{BC^2}{2AD} = CD
\]

Hence the depression of the true level is equal to the square of the distance divided by twice the radius of the curvature of the earth.

“ For example: taking a distance of 4 miles, the square of 4 = 16, and putting down twice the radius of the earth’s curvature as in round figures about 8,000 miles we make the depression on 4 miles equal

\[
\frac{16}{8000} \times 1760 = \frac{176}{50} = \frac{528}{50} = 50.56
\]

or rather better than 10 5/8 feet. Or, if we take the mean radius of the earth as the mean radius of its curvature, and consequently 2AD = 7912 miles, then 5,280 feet being one mile, we shall have CD the depression in inches equal

\[
\frac{5280 \times 12 \times BC}{7912} = 8008 \text{ BC inches.}
\]

“The preceding remarks suppose the visual ray CB to be a straight line; whereas on the unequal densities of the air at different distances from the earth the rays of light are incurvated by refraction. The effect of this is to lessen the difference between the true and apparent levels but in such an extremely variable and uncertain manner, that if any constant or fixed allowance is made for it in formulæ or tables it will often lead to greater error than what it was intended to obviate. For though the refraction may at a mean compensate for about a seventh of the curvature of the earth, it sometimes exceeds a fifth, and at other times does not amount to a fifteenth. We have therefore made no allowance for refraction in the foregone formulæ.”

It is thus seen that the degree of convexity per mile will be eight inches multiplied by the square of the distance. This must apply to the surface of the water equally with that of the land; but it must be remembered that with water at sea there is a constantly changing attitude; so it is possible that an objection might fairly be made to this method of
measurement of a distance of arc of the surface of the water. It might happen that if this mode of measurement were applied to a certain extent of standing water on the land, it might somewhat fail, inasmuch as the surface of the water might actually be a plane owing to the nature of the land on which it was. However, in the fen country of England there is a kind of canal known as the “Old Bedford,” in length some 20 miles, on which an experiment was made in the following manner:—A distance of 6 miles was selected and from a point, A, a boat with a flag standing 3 feet above the water was directed to sail to the end of the distance (six miles), which we will call B. An observer with a telescope fixed at 8 inches from the surface of the water, sighted this boat, and pronounced the whole of it to be clearly visible throughout the entire distance.

From this fact a conclusion was at once arrived at (and justly so—Ed.), that the arc of convexity of the surface of the water was NIL; or, in other words, the surface of the water was a PLANE.

Now, according to what was said as to the degree of convexity of any arc being equal to 8 inches multiplied by the square of the distance,—in this case, at the distance of 3 miles from the observer, the boat would be floating on a surface of water exactly 6 feet lower than the line of sight from A to B which was said to exist; and consequently as the boat approached the distance of 6 miles when once past the distance of 3 miles, it would seem only reasonable to suppose that it would gradually have ceased to be wholly in view; or in fact to have been in view at all at the end of the distance.

This experiment may be found mentioned in a book entitled Zetetic Astronomy, published by Messrs. Simpkin, Marshall & Co., London, where it will be found illustrated by appropriate diagrams. To the same work I am indebted for some information concerning an observation made from the Isle of Man across the Irish Sea. The distance between Douglas Bay (Isle of Man) and the Great Orme’s Head in North Wales is fully 60 miles. At an altitude of not more than 100 feet in Douglas Bay, the Great Orme’s Head, can be seen distinctly in clear weather. Now taking into consideration the convexity of the earth’s surface (the distance of arc between these two places is sixty miles), according to the calculation which has already been explained, the centre of this arc would be 1944 feet higher than the coast line at each end: thus it seems natural to suppose that if the Great Orme’s Head is to be seen from Douglas Bay it would be necessary to be at an altitude of 1,944 feet at the latter place. How it might be asked, is this fact—namely, the possibility of seeing a something at one end of an arc of 60 miles from the other—to be accounted for, if the mode of measurement of the earth’s convexity be correct? For, with an altitude of only 100 feet at the end of the arc (sixty miles) from which the observation is made, a something is seen at the other end of it. Many like observations to this have been made in different places, and similar results have been obtained which would support the theory of those who maintain that the surface of the earth is a plane.

(to be continued.)

RELIGION AND SCIENCE.

Under the above heading several articles have appeared in The Clarion,—the annexed extracts will speak for themselves—bearing unmistakable evidence of their aggressive tendency and the atheistic trend of modern so-called astronomical science.

“Agnosticism” has been elaborated and supported by a class of individuals whose belief is fixed in their ability to judge all things; and a deep rooted faith in the infallibility of modern science in its every branch and line, and especially the globular theory.

“The fool has said in his heart there is no God.” Thus saith the Scriptures. And though the agnostic does not say openly that there is no God, he says it in his heart that there is no such God as the God of the Bible; therefore he comes under the Psalmist’s definition. The agnostic may even own that there is some sort of a god, but he disowns the God of the Scriptures, and he does not believe in the inspiration of those Scriptures as having come from God.

This only proves the truth of the apostle’s statement that the carnal mind is enmity against God. It can take the
RELIGION AND SCIENCE.

word of man for truth—any extravagances which the astronomer or scientist may utter—but it has a special enmity against God's Holy Word and Will. Apart from Jesus Christ and the Bible no man can rightly believe in God, nor can he know the truth about God's character.

The agnostic spirit has another operating motive, which goes to uphold whatever is called "science"—especially as against Bible teaching, and those Christians who attempt to uphold the Scripture-contradicting globular theory are not in a position to answer the impeachments which are laid against the Bible in The Clarion. There was a notable instance of this in a letter forwarded to us, which appeared in The Christian Commonwealth, attempting to answer The Clarion. The writer's position was deplorable; he was indeed handicapped with "science, falsely so-called," which (although doubtless with good intention) he endeavoured to carry hand in hand together with the Bible! But, alas! it made him feeble, and his reply, which otherwise was good, was not only unreasonable but ridiculously so on those lines where he endorsed Scripture-contradicting science. Yet we repeat that it is "doubtless" that the writer's motive was charged with the good intention of upholding the truth of the Bible.

The noted infidel, Tom Paine, truly stated that the two beliefs, "modern astronomy and the Bible cannot be held together in the same mind, and he who thinks he believes both knows very little of either." The Ed. of T. C. perceives the truth of such reasoning in the above statement, and he therefore naturally ridicules the untenable position adopted by the majority of Christians in professing to believe in the Bible, which contradicts the whirling globe theory, while at the same time they profess to have faith in the latter. The Ed. of The Clarion is aiding us to establish the fact that the Bible and modern astronomy are at variance, and we will give extracts from The Clarion, showing how the false and so-called "science" of the day is leading men away from God and His truth to land them in foolishness, darkness, and death. As specimens take the following quotations:

Extracts from The Clarion. "THE UNIVERSE AND ITS CREATION." By R. Blatchford.

"The theory of the early Christian Church was that the earth was flat, like a plate, and the sky was a solid dome above it, like an inverted blue bell. The sun revolved round the earth to give light by day, the moon

doubted and denied. They are also proved in themselves by their excellent and pure teaching; and that they are the production of inspired men from God seems evident from the following arguments:—(1) That no good man or men could have "invented" them, which would be wicked; (2) Nor could wicked men produce such perfect teaching. Neither is it possible that they are the production of Satan or his evil spirits, from the same reasons, viz.: wicked beings would not inculcate good. It is utterly impossible to believe, therefore, (from a humanly argumentative standpoint alone) that they were written by others than the authors ascribed to them.

The above is the 153rd question, from Questions and Answers on the Bible and Nature, by the Ed. of The Earth.

It is a fact that the Bible contains sufficient light in itself for men to accept it as truth if they will only search the Scriptures in an honest and candid spirit, and with at least as much diligence and reason as they would exercise over earthly things. The Bible bears evidence within itself, and "he that believeth" hath the witness within himself.

If we know its healing power and beauty we must acknowledge its potency. We pray that the Ed. of The Clarion may be brought to a knowledge of the truth, and to confess (as we have had to confess) that he is a sinner, and that he, even as others, has broken God's holy Law; and further to accept Jesus, the Son of God, with power as his Saviour.

For unto Him all power is given, both in heaven and in earth beneath." It hath pleased God that it should be so.

With respect to The Clarion the Ed. of The Earth has sent replies to the statements which have been made in the first named paper, but its editor has not inserted them. As space permits we will therefore reproduce our letters in Questions and Answers on the Bible and Nature, showing how the false and so-called "science" of the day is leading men away from God and His truth to land them in foolishness, darkness, and death. As specimens take the following quotations:

Extracts from The Clarion. "THE UNIVERSE AND ITS CREATION." By R. Blatchford.

"The theory of the early Christian Church was that the earth was flat, like a plate, and the sky was a solid dome above it, like an inverted blue bell. The sun revolved round the earth to give light by day, the moon
RELIGION AND SCIENCE.

Last week I gave a brief and imperfect sketch of the known universe. My object was to suggest that the Creator of a universe of such scope and grandeur, a universe of 20 millions of suns, must be a Being of vast power and dignity. This week I shall try to compare the modern idea of the universe with the idea given in the Bible, and to show that the ancient Jewish God, Jehovah, was utterly incapable of conceiving a scheme of creation so magnificent as that which science has revealed. For it is to human labour, and to human science, and not to divine inspiration, that we are indebted for the expansion and elevation of our ideas of the universe and its Creator. The universe as revealed to us by man, contains 20 millions of living, moving, radiant suns, with all their wonderful revolving planets, comets, meteorites, and nebulae. The universe, as revealed in the Holy Scriptures, consists of a flat immovable earth, covered by a solid dome of sky, in which are set a small sun and moon, and a sprinkling of stars, all of which were created to give light to man. The difference between the human and the inspired conceptions of the universe is too glaring to need any comment of mine. The universal of the Bible bears about the same relation to the universe of fact as a candle to the sun. The scientific conception also is true, whilst the Bible conception is false."—The Clarion, April 24, 1903.

We should like to ask the editor of The Clarion whether he has examined into the truth, or otherwise, of the system of the universe as taught by modern astronomy? We think he has not; and that moreover he shows a marked bias and leaning towards whatever "science" teaches in opposition to the Bible. He accepts the unverified statements of so-called scientists with the same unreasoning gullibility as he accuses Christians of doing, regarding the Scriptures. But the dictates of reason should teach us to believe in the Bible motto of "proving" things, and holding fast that which is good.

The Clarion is right, we are sorry to think, in saying that many advanced "Christians" (we should call them recreant Christians) have gone over to science as against the Bible. All those who have thus unreasonably given up a part should in all consistency give up the rest, and join the camp of the infidels; for traitors in the camp do more harm to the truth than open and avowed infidels. Evidently the Ed. of The Clarion belongs to the latter class, and it is a pity that some of the paid defenders of the Bible make such a poor show against him. But it is impossible for them to do better while they accept the infidel and God dishonouring system of evolution which is now so popular, and which has naturally sprung from the fabulous belief, of pagan origin, that we are living on a self-revolving and whirling globe.

All communications and inquiries respecting this Magazine and the teaching it upholds, and all questions and matter for insertion, should be addressed to E.A.M.B., 11, Gloucester Road, Kingston Hill.

"THE EARTH'S" OBSERVATORY.

The Ed. does not necessarily endorse statements made under the headings of "The Earth's Observatory," Letters, etc., unless signed Ed. The Earth.

THE "EARTH QUESTION."
Professor Hathaway Expounds His Theory in Reply.

To the Editor of the News.—Sir, I have before me a copy of your paper of the 2nd inst., in which I see an article in regard to the 'Earth Question'.

As you have given space in your paper to the side of the globe believers I thought that the citizens of Waltham would be interested in reading something from the other side and by your courtesy I will submit the following:

On or about the 21st of March and 21st of September the sun travels in a circle called the 'Equator' and is thus at right angles to the earth and sea at all points on that circle. This fact constitutes the standard measuring rod for all observations for finding the ships position at sea. If, for example, we are in latitude 20 degrees N or S, the altitude of the sun centre at noon the time when the sun reaches its maximum altitude at our position, on, say the 21st of March will be 70 degrees. If in 70 degrees N or S the altitude will be 20 degrees. From March 21st the sun travels in a northerly direction until it attains its greatest northern declination about 21st of June so that on any day except that on which the sun is on the equator the declination has to be taken account of.

On May 1, 1895, sun's declination was 22 degrees, 8 min. N altitude, sun's centre 25 degrees 14 min., bearing W, required latitude.

<table>
<thead>
<tr>
<th>True altitude sun's centre</th>
<th>35° 14'</th>
</tr>
</thead>
<tbody>
<tr>
<td>Latitude</td>
<td>64° 40' S</td>
</tr>
<tr>
<td>Declination</td>
<td>99° 8' N</td>
</tr>
<tr>
<td>Latitude</td>
<td>42° 38' S</td>
</tr>
</tbody>
</table>

In this case had the observations been taken when the sun was on the equator the latitude would have been 64 degrees, 8', but as the sun had gone 22 degrees...
of ours offered to write an article, or a letter, to Past and Future, showing up some of Mr. Dimbleby's Chronological errors, to say nothing of his Cosmological errors. But the required permission was not granted.

We trust our Shorncliffe correspondent will thus see that we dealt with his communications in a more generous spirit than is shown by some editors, and if he likes to offer us a proof of the earth's motion, as suggested above, we shall be glad to print it; otherwise we think that this explanation of the matter must suffice.—Ed.

"SUNBURN AT THE POLE."—The New Zealand Shipping Company's steamer Paparoa, which was in Lyttleton Harbour when the relief ship Morning arrived from the Antarctic, anchored in Plymouth Sound at noon yesterday. She brought home the first member of the Discovery's crew to reach England, and also one of the crew of the relief ship, Morning.

The Morning's crew said that they often found the heat of the perpetual sun oppressive, and that they actually became sunburnt. It was a curious experience passing Christmas and the New Year in perpetual daylight and playing cards on deck at midnight with the sun beating down. Later on darkness began to assert itself and midnight was marked by faint shadows like twilight.

The only bit of green vegetable seen by the Morning's crew on her voyage was a crop of mustard and cress, grown by the officers on a wet blanket, with Antarctic soil.—*Daily Mail*, May 11, 1903.

J. MARRIOTT, (Sergt.-Maj.), Shorncliffe.—This correspondent complains that in the last issue of The Earth, p. 182, twelfth line, he is made to say "that the sun has progressed about 1 degree on its journey round the earth and that in his article the "apparent motion" of the stars becomes "actual motion." It is necessary to explain to our readers that the writer of that article, or rather manuscript, is a globularist who believes in the Chronology of the Bible teaching in one way or another, we took the liberty of altering those two words in his manuscript, which read: "the earth has progressed about one degree in its journey round the sun." The M.S. was very long, and whilst we deleted paragraphs which we thought not true to Bible Cosmogony, and are not aware that we altered anything except transposing the two words above referred to, namely "sun" and "earth," we thought the transposition necessary, and that it would not affect the writer's argument on Chronology, which was the main subject of the manuscript.

We cannot, therefore, say it was a printer's error. But if our correspondent can produce one unimpeachable proof that the earth has ever progressed "one degree," to say nothing of 360 degrees, we will admit that proof in the pages of The Earth, and if we cannot expose the fallacy of that "proof," we promise further to tender him our apologies. We cannot say anything further. We thought we had dealt with him, both in his letters and in his report of his lecture, in a generous spirit; but our good intentions too often are unappreciated. Would Mr. Dimbleby—Ed. of Past and Future—with whom he is in agreement,—would Mr. Dimbleby, we think not; for it came to our knowledge a short time ago, that a correspondent
Agents for the Colonies. I hope Mr. Evans will accept these as competent authorities—at least from the standpoint of engineering practice.

"It is however possible to eliminate completely all errors due to curvature. To this end it is only necessary to plant the level, not directly over one of the points whose distances are to be determined, but midway between the two. It is evident that by so doing, the error due to curvature will be equal in both directions, and that the difference between the two staff readings will be the true difference between the levels of the two points. The effects of curvature are thus entirely eliminated, and need no further consideration. The line of equal altitudes so determined may be treated as a truly level line, even in the most extensive levelling operations.

"The above is the usual practice in levelling operations, and involves no error as regards physical results. If a railway were set out in this manner, and accurately level, the top of the rails would be a curved line, concave to the centre of the earth. In a length of a few miles this curvature would be very perceptible, but nevertheless a railway carriage on the line would not tend to move in one direction or the other, for the rails would at all points be at right angles to the direction of the plumb-line, that is to say, to the direction of the force of gravity."

It almost seems to have been written in anticipation of Mr. Evans' letter. I am, yours truly, H. J. YOUNG.

[It seems absurd to first assume the Earth's curvature and then talk of "eliminating the errors" due to curvature! The curvature should be proved.—Ed.]

41, Bintall Road, South Tottenham. March 28th, 1903.

Madam,—Wishing to know whether I have discovered a fresh proof that the Earth is not globular, and feeling convinced that you are fully acquainted with all known proofs in that direction, you will no doubt be able to inform me whether my little experiment, and its application to this subject, has already been observed or not.

I have at home a large bowl which is slightly convex outside at the bottom, so that if placed on a smooth surface it is easily turned round. Se-ing this bow full of clean water one day recently, I happened casually to turn it round, and at the same time, whilst looking at the surface of the water, noticed that some specks of floating matter did not go round with the rim of the bowl. I then placed a match and broke it into small pieces to represent, as it were, ships, and let them float in different parts of the water near the rim of the bowl; then waiting till the water was quite still, gently turned the bowl round, and found that the water with the pieces of wood floating upon it was scarcely disturbed at all in spite of its weight (or as the globalists would have it—"gravity") on the bottom, and lateral pressure on the sides of the bowl, the same thing happening upon turning the bowl faster.

It at once occurred to me that this being a fact, viz., That water does not travel round with a revolving body though resting upon it. Therefore, if the Earth is a globe there must be immense tracts of ocean, particularly in the southern hemisphere, in which water would remain practically stationary (excepting currents caused by wind, &c.) and all steamers adrift on such portions of the ocean could let their guns go down, and allow the earth to pass on 230 years without the desired longitude was reached, then getting steam up again, proceed North or South, as required, to destination. This, of course, would be a most economical method of getting round the "globe," and that such would be possible were the Earth a globe I think is beyond dispute, because the coast and land being the firm and solid part of the Earth must necessarily rotate with it during the diurnal motion, but water being mobile and comparatively free at the surface (and for a long distance down also) would be unaffected, except perhaps where in immediate contact with the land whether at the surface or lowest depth. I should very much like to try the experiment on a large scale, with miniature continents, &c., in correct proportions, for although a convex surface could be determined, it would show that in spite of so-called gravitation, the adhesion of the mass of water would not be sufficient to permit of it being carried round with revolving solid portion.

Perhaps you will make some comments upon this matter in the next number of The Earth, and with which I am very pleased; and trusting the truths it upholds may gradually gain popular favour.

I remain, madam, sincerely yours, V. A. WRAIGHT.

To the Editor of The Clarion.

March 27th, 1902.

Dear Sir,—"Faith in the Crucified and Risen Lord saves . . . is not a matter of Speculation. It is a fact that tens of thousands of men and women now living, also myriads that have lived in the past would have flatly endorsed the above statement, which forms part of a letter, in The Clarion, Feb. 19th, 1903, signed "One whose religion has still bottom." But speaking not only for myself personally, but also for all the members of the "Universalist Club" So long, which I represent as Official Editor of its Organ, The Earth, we cannot endorse the following statement made in the same letter:

"If you are going to tie us down to Genesis, then Christianity had the bottom knocked out of it 200 years ago, when it was first proved that the Earth was round, not flat, and that it moved round the sun, and not the sun over it.

Now we maintain that the Bible is as scientifically accurate in its account of Creation as it is in setting forth Life Eternal, and Re-Creation, in and through Jesus Christ. Also, the words of our Blessed Redeemer condemn the position of the above writer. Our Lord said: "Had ye believed Moses, ye would have believed me, for he wrote of me. But if ye believe not his writings, how shall ye believe my words?"

What right have we to accept the offer of Salvation set forth in the Bible if we deny the teaching of the Saviour, and also the writings of Moses and the Prophets, who were the mouthpieces of the Deity, which the Christ endorsed? The Christian's acceptance of the globe theory is a fearful violation of His given reason! In fact it is an untenable position, that can only be described as building "upon the sands." If the Bible could be proved false in one line it would then be unreliable in other lines. But there is no "if" in this case; and that it could be proved unreliable is an impossibility. For "he that believeth hath witness within himself." We stand by the Cosmogony of the Bible as set forth by the Creator Himself, knowing assuredly that it is as reliable as His promise of redemption through the Redeemer, whom He has appointed for our salvation: "For God so loved the world (this only world) that He gave His only begotten Son, that whosoever believeth in Him should not perish but have everlasting life."

What right have we to accept the offer of Salvation set forth in the Bible if we deny the teaching of the Saviour, and also the writings of Moses and the Prophets, who were the mouthpieces of the Deity, which the Christ endorsed? The Christian's acceptance of the globe theory is a fearful violation of His given reason! In fact it is an untenable position, that can only be described as building "upon the sands." If the Bible could be proved false in one line it would then be unreliable in other lines. But there is no "if" in this case; and that it could be proved unreliable is an impossibility. For "he that believeth hath witness within himself." We stand by the Cosmogony of the Bible as set forth by the Creator Himself, knowing assuredly that it is as reliable as His promise of redemption through the Redeemer, whom He has appointed for our salvation: "For God so loved the world (this only world) that He gave His only begotten Son, that whosoever believeth in Him should not perish but have everlasting life."

What right have we to accept the offer of Salvation set forth in the Bible if we deny the teaching of the Saviour, and also the writings of Moses and the Prophets, who were the mouthpieces of the Deity, which the Christ endorsed? The Christian's acceptance of the globe theory is a fearful violation of His given reason! In fact it is an untenable position, that can only be described as building "upon the sands." If the Bible could be proved false in one line it would then be unreliable in other lines.
of the Bible may he tested by its Cosmogony?"; for true Cosmogony is the foundation of all Revelation, and it confirms the evidences of our senses, which are God-given.

A plane and motionless Earth is taught in the Bible. And God made two great lights (although light was created first) to divide the light from the darkness, and to give light upon the Earth. But this is far too simple for the tastes of some! The globe theory has raised a taste in the minds of the people for Pythagorean fables, and at the same time a taste for the simple truth. Alas! modern "scientists" and atheists discredit the Mosaic account of Creation, but they cannot disprove it—none of them could possibly do so!

I could write many volumes upon this subject (the Lord, in his mercy, having shown me the truth regarding Creation), in fact I am thus engaged, but must now conclude this letter with a few questions to the editors of the whirling globe theory.

Where did your globe come from? Who made it into a globe? Who was the man that found out that the world was a globe? In what year was this found out, and where can the proof be seen? Could you tell us how he found it out?

And oblige, yours truly, E. A. M. BLOUNT (Lady).

THE EARTH'S OBSERVATORY.

As intelligence developed, and threw out its tentacle-like arms to grasp further knowledge of what the shape of the earth was, it cast aside the belief which had hitherto swayed those earlier minds, and adopted the newer teaching—viz., that the earth was not only surrounded by water, but that it also floated upon water. They still believed that the earth was flat, and that it also floated upon water. They still believed that the earth was flat, and that it also floated upon water.

Water, however, did not make them abandon the idea of a flat Earth, but rather the idea of a flat Earth was abandoned. The idea of a flat Earth was abandoned because the water was not flat, but rather the water was spherical. The water was spherical because the water was round, and the roundness of the water was demonstrated by the fact that water flowed into a round bottle when it was placed on its side, and by the fact that water did not flow into a flat bottle when it was placed on its side.

The idea of a flat Earth was abandoned because the water was not flat, but rather the water was spherical. The water was spherical because the water was round, and the roundness of the water was demonstrated by the fact that water flowed into a round bottle when it was placed on its side, and by the fact that water did not flow into a flat bottle when it was placed on its side.

The idea of a flat Earth was abandoned because the water was not flat, but rather the water was spherical. The water was spherical because the water was round, and the roundness of the water was demonstrated by the fact that water flowed into a round bottle when it was placed on its side, and by the fact that water did not flow into a flat bottle when it was placed on its side.

THE EARTH'S OBSERVATORY.

It is true, they continue that ships have sailed from east to west, and vice-versa, but never from north to south.

The disappearance from sight of the hull of a ship at sea before the masts is a fact, but not a proof of the shape of the earth.

The round shadow on the surface of the moon during a lunar eclipse is no proof that the earth is round, because it has not been proved that the shadow really is that of the earth.

Again, say they, if the earth were a 'sphere,' the people in the Antipodes would be walking head downwards.

The preceding are the principal objections raised by the 'flat earthists,' which are more remarkable for their curiosity than their science. — From Answers, March 28th, 1893.

[In answer to the above the following letters were sent.]

To the Editor of Answers.—In the current issue of Answers, for March 28th, I notice an article with the above heading, and asking the question, "Is the earth really round?" Perhaps you will kindly allow me to make a few remarks upon the same.

I am glad your correspondent refers to the subject as a "riddle," and not a demonstrated truth, for he is very near the mark here. A riddle is "an enigmatic proposition or puzzle; or anything ambiguous or puzzling." Both Pianists and Globites alike find the riddle of the globe puzzling; the former are puzzled to find where the proofs come in, and the latter are puzzled to find them. An enigma is something "obscurely expressed," and sometimes, "a purposely ambiguous or puzzling." The so-called proofs of the earth's globularity are indeed particularly obscure. The writer of your article says one of the proofs of the "round earth theory" (he means the whirling globe theory) is, "the farther north or south you go from any place, the positions of the stars, their daily path in the heavens, and the time of rising and setting are altered, and new stars altogether invisible come into view as the traveller proceeds." A similar kind of phenomenon is observable in a line of street lamps also; along a level road or promenade. It may be noticed at most of our fashionable watering places if you start at one end of the line, and fresh lights come into view as you go along, and those you saw at the first appear to dip, and finally vanish. This is due to perspective, the same as the appearance and disappearance of stars, which no more proves the earth to be globular than the disappearance of the lamps on the promenade would prove the promenade to be globular. If people better understood the laws of perspective they would see the weakness of such a "proof" of the globular theory; but until they do they will puzzle their minds, or allow the astronomers to puzzle their minds with "The Riddle of the Globe." As for the question of circumnavigation, teachers are now candid enough to own that circumnavigation is not a proof of the earth's sphericity. Your reporter shows that this is not a proof, for, as he well puts it in quoting my words, "Sailing round the British Isles would not make Great Britain globular."

I don't wish to make my letter too long, but I should like to quote an admission of this fact from a work called "Elementary Physiography" by K.A. Gregory, author of Physical Astronomical Geography, Comptroller of the Solar Physics Committee, South Kensington, and F.R.A.S., page 110. He says:

"We can journey round the globe, sometimes travelling on land and sometimes on sea, but eventually return to the starting point without at any time turning back on our course. This would appear to be a certain proof that the earth's surface is curved, nevertheless it has been pointed out that circumnavigation would be possible if the earth had a FLAT surface with the North Magnetic Pole at its centre. A compass needle would then of course point to the centre of the surface, and so a ship might sail due east or west and eventually return to the same point by describing a circle."

So that Mr. Gregory, as a Fellow of the Royal Astronomical Society, candidly admitted that circumnavigation is no proof that the earth is a globe, for he further gives this as a "proof that circumnavigation would be possible if the earth were flat." We respect Mr. Gregory for his candidour, but his confession only makes "the riddle of the globe" all the harder to solve. It is all plain to the pianist that the "Riddle" is for the other side. We can say the same of the other so-called "proofs" which are offered us, but I fear that to do so would make my letter too lengthy. — E. A. M. BLount.

The wording of the above title and the trend of the article in Answers, (with the impossible pretension of a man measuring the outside of the so-called globe) would naturally lead one to suppose that the writer had been reading "The Riddle of the Universe," by Ernest Haeckel, Ph.D., and Professor at the University of Jena. That this work is brought out in England under the auspices of the Rationalist Press Association pre-supposes that the author postulates a world which has been self-evolved out of eternal self-existing matter. The Answers writer must however be credited with a belief in God, for he refers to a period when the First Intelligence was communicated to man, and he says that our ancient ancestors mapped out in their minds a flat disc of land surrounded by a great river, and in process of time they thought that the earth floated upon water. In the progress of the ages the more learned began to think that this theory was incorrect, and it was eventually refuted as an "optical illusion;" but, as a matter of fact, the oldest account of the solving of the world-problem is in the Bible, wherein we are told that "in the beginning God created the heaven and the earth,... And God made two great lights; the greater light to rule the day, and the lesser light to rule the night. He made the stars also, and set them in the firmament of heaven to give light upon the earth." The Chaldean version of Job xxvi. 7, reads: "He layeth the earth upon the waters nothing sustaining it." In 2 Peter iii. 5, we read: "By the word of God the heavens were of old, and the earth standing out of the water and in the water." Answers' writer is mistaken in supposing that scientific knowledge of the earth and the heavenly orbs belong to modern times. Even Haeckel says: "The study of the heavens is the oldest, with regard to the starry heavens, the motions of the planets, and so on, man had acquired astonishing information 4,000 years ago. The Egyptians and Chaldeans in the distant East knew more of the science of the spheres than do the majority of educated people in this country 4,000 years after them. An eclipse of the sun was astronomically observed in China in the year 2697 B.C., and the plane of the eclipse was determined by a gnome 1,100 years B.C." But we can trace back still further; showing that regarding eclipses of the moon and the sun, our "scientists" modern in false colours run, Decked with honours they've pillfered, or not fairly won; But let it forever be known, To Antediluvians this honour should stand, Through Adam, received from the Creator's own hand, And Josephus tells us that, by God's command, Seth wrote those eclipse tables on stone.
All these people acted upon their sense-perception that the sun (not the earth) moves.

The globular theory is not ancient. It is modern, and absolutely atheistic in its trend; making our God-given senses of no account; telling us that, although we see the sun move, yet it does not move, but the earth moves and is rushing through space, in addition to other fearful motions, at the rate of about 19 miles every second, and yet we perceive no motion. Again, the Scriptures tell us that the stars of heaven will fall upon the earth; but the globularists say that the stars are mighty worlds, nearly all of them larger than the earth. How can the earth, with a supposed diameter of 8,000 miles, receive the numerous stars of the firmament? Can a whale rush down the throat of a herring, or an elephant ride on the back of a mouse?

How the position of the stars settles the theory into a fact that the earth is a "ball," is a piece of non-scientific reasoning on the part of the *Answers* writer, who says that the farther north or south one goes from any place the position of the stars, their daily path in the heavens, the time of their rising and setting, are altered, and new stars altogether invisible come into view as the traveller proceeds. As a matter of fact the stars visible from London rise and set in a way not compatible with the doctrine of rotundity. If we stand with our backs to the north on the high land known as Arthur's Seat, near Edinburgh, and note the stars in the zenith of our position, and watch for some hours, the zenith stars will gradually recede to the north-west. On Woodhouse Moor, near Leeds, and on the Yorkshire mountain tops, and Derbyshire, the same phenomena is observed; also from the top of Primrose Hill, Hampstead Heath, and Shooter's Hill. We shall observe the same stars rising towards our position from the north-east, showing that the path of all the stars between ourselves and the northern centre move round the north pole-star as a common centre of rotation—just as they must do over a plane, such as we know the earth is proved to be.

Upon a globe, zenith stars would rise, pass over head, and set in the plane of the observer's position; "rotundity" is also disproved in what actually takes place, and is not hypothesized.

The Editor of *Answers* kindly returned my letters, with the following note.

2, Carmelite House, Carmelite Street, London, E.C.

April 4th, 1863.

Madam,

I am in receipt of your ladyship's letter and literature on the subject of the Globe. I regret, however, that the columns of *Answers* are closed to correspondence entirely, and I am therefore compelled to return your letters. But I am keeping the literature you have sent me as it is interesting reading. Your ladyship may, perhaps, accord me an interview one day for publication in *Answers*.

I am, Madam,

Lady Blount.

Your ladyship's obedient servant.

THE EDITOR.

When sending a copy of *The Earth* to my son a few months since, I could not help writing under the Scripture statement—"Of old hast thou laid the foundations of the earth,"—the following. There is no mention in the Bible of the foundations of the sun, or of the moon or the stars. Why? Because they were made to be suspended, and to move, or revolve, in the heavens as attendants and ordinances for the earth; and therefore not necessitating the fixture by foundations.

Your journal becomes more and more interesting as the months pass on, and there is even a fresh beam of astronomical light radiating from its pages; the result, I presume, of research and the desire to direct the thoughts of the people on the lines of astronomical truth as declared in God's Word, and supported by the surrounding facts of His creation; which are ever telling of the wonder of His works.

Yours faithfully,—J. L.

THE EARTH NOT A GLOBE.

To the Editor of the District News.

Dear Sir,—I have shown clearly what and where the horizon must be if the earth be a globe 24,000 miles in circumference; we do not find it as stated and therefore must look for some other law governing the phenomena of objects disappearing as we recede from them, the bottom parts first. What is the horizon? Let us clearly understand this first. It is where the sea and sky appear to meet in the distance, and this is always on a level with the eye, no matter how high the eye is above the surface of water the horizon can never be seen except on a level with the eye.

If you get a carefully bored tube, say a gun barrel, and carefully level it, you will find on looking through it that the horizon is exactly in the centre of the tube; if you depress the tube the least you will see nothing but sky; it can only be seen on a level with the eye, and this will be so no matter what height the eye is above the surface of the water. Place the tube properly levelled on the shore, high enough above high tide to see somewhere on the coast where there is, say, 30 to 40 feet rise and fall of the tide, look through at low water and it will be level with the eye, look through at high water, it will be level with the eye.

The same phenomena applies to objects horizontal as well as vertical. That is to say, long lines of rails that are parallel appear to come in a line central with the eyes both on the right and left and both appear to meet in the distance exactly in the centre of the eyes, forming as it were an horizontal horizon, corresponding with the vertical horizon as above described, and this always in a basin-like form. The experience of all aeronauts confirms this. Professor Glaisher, late Astronomer Royal, who died last week, ascended in a balloon with the late Mr. Coxwell to a height of 7 miles, the highest ever known to be accomplished by any man. I have a pamphlet written by Glaisher at the time. This perilous voyage was undertaken for scientific purposes, the principal one being to see the shape of the earth. During this trip Mr. Glaisher found his arms powerless, owing to the rarified atmosphere and cold through which the balloon was passing. He tried to shake himself but seemed to have no limbs. Looking at the barometer, his head fell over on his shoulder; he got it upright by an effort of will and it fell again and he himself then fell down helpless in the car. Intense darkness then came over him, as though from some paralysis of the optic nerve, for the brain itself was working as clear as ever. Mr. Coxwell's hands were benumbed and he had to tear the valve open with his teeth. As the balloon rapidly fell Glaisher revived, as one waking from sleep, and took a pencil to continue his observations. They descended outside Birmingham and soon recovered. Mr. Glaisher says that "quite contrary to what they expected, instead of the earth falling off at the sides it actually appeared to rise, and appeared to be a concave surface, like the rim of a shallow inverted watch glass, to the height of the eye of the observer, how high soever he may be, the blue atmosphere above closing over it like the corresponding hemisphere reversed. As we ascended the earth beneath us seemed to recede, actually to sink away, while the horizon gradually..."
To the Editor of the District News.

Sir,—I have now been before the public, on the platform and in the Press, upon the above subject for 40 years, and during that time have met various kinds of argument, but very few who understood either one side or the other of the subject, or that ever made a single experiment to prove it factually. And I take Mr. Colbran to be a fair sample of the opponents I have had to contend with ; 999 out of every thousand accept the Newtonian hypothesis, therefore I shall not bother further about it but follow the crowd. But what Mr. C. does is to talk about. I have frequently had to put some of our own school right in the face to be a system of switchbacks. I then threw out a challenge, and do so now to Mr. Colbran (or anyone else), that the two end signals shall be fixed twelve feet above the surface of the water, and the middle or three-mile signal shall be six feet above the surface ; the tops of these three signals should then appear in a straight line when viewed through a properly adjusted telescope. Now, if twelve gentlemen, to be selected by both sides, declare that they see these three signals in a straight line, I will pay all costs of the experiment; if on the other hand they are declared not to be in a line the other side to pay the costs. I am still waiting reply. Will Mr. Colbran take it up? Now, sir, instead of Mr. Colbran, let the learned Professor Oldham give his views to the world. As he announced he would do, he and his party again visited the scene of the trouble to come here. My next letter will deal with the shadow on the moon during a lunar eclipse. 

Ripponden. E. J. SHACKLETON.
The Jews, indeed, have protested against the implied insult to Moses, that he was indebted to Babylonian traditions for some of the most noted of the events and principles recorded in the Pentateuch. But, are not Christians equally dependent on the Mosaic records in many respects; and ought they not to be jealous when the vilest of all corrupters of Divine Truth are credited with the origin of much that is held for sacred amongst us?

It may seem a small matter to some, whether a code of laws, a "thousand years older than the Mosaic age," can be proved to be superior to those which we have hitherto regarded as the very foundation of just legislation all over the world; but when the chief city and the civilization of Chaldea are actually given the whole credit, in point of priority, of Commandments which are stated in Holy Writ to have come direct from God Almighty, it is quite time to wake up, and defend the very foundations of the faith which we profess.

One or two questions might, I think, be asked of your learned contributor, viz.:

1. Why does he take King Rhammurabi so much at his own estimate, when the boastings of Nebuchadnezzar are very properly discounted as the ravings of an ignorant heathen despot?

2. Does he think the authority of Father Schiel, O.P., sufficient to justify the white-washing of a city which is set forth in Holy Scripture as the very type and image of all that is deceitful and abominable?

I do not doubt but that much valuable information has been obtained by Eastern Researches during the last 150 years; but at the same time it cannot be altogether irrelevant to refer to the opinion of scholars at a time when Lord Bolingbroke endeavoured to establish very similar ideas, as being deducible from then available records.

In an elaborate answer, made publicly by Dr. Clayton, Bishop of Clogher, to his lordship, the following passage occurs, which I commend to the consideration of those who may be tempted to believe too much in the self-laudatory chronologies and inscriptions of ancient semi-civilized nations. The quotation is as follows:

"We have no history of the transactions in Egypt in any profane author, that can be depended on, until many years after Moses was dead,—for as Sir Isaac Newton, in his Chronology, remarks: before the use of letters the names and actions of men could scarcely be remembered above 80 or 100 years after they were dead; and as there is no certain history, either of Egypt or of any other part of the world which can in the least be depended upon before that period of time, but what is in this Book of Genesis; therefore, I take it for granted that this book is the first that ever was written in the world."

I am, Sir, your obedient servant,

EDWD. HAUGHTON, B.A.,
And Senior Moderator in Natural Science,
Trinity College, Dublin.

To the Ed. of The Times.

[Copy now addressed to the Ed. of The Earth.]
CH. DAMIEN'S SYSTEM.
FRENCH IN THREE MONTHS!
REVISED EDITION, 1902.

We have much pleasure in recommending the above work.

The booklet contains the three thousand words, and idioms, which are most used in ordinary conversation; sufficient to enable you to talk French all your life; no fossil philological peculiarities, but French as it is actually spoken in France. Grammar underlies each group of examples, and we think this a cleverly condensed method of teaching the French language.

The Author of French in Three Months also gives Lessons in Conversational French to adults, at

128, CROMWELL ROAD, LONDON, S.W.;

AND

64, ROSSLYN HILL, HAMPSTEAD, N.W.

Friends of the Ed. of this Magazine can testify to his ability and agreeable way of teaching.

THE EARTH.

Vol. III.

AUGUST AND SEPTEMBER.

Nos. 37 & 38.

CELESTIAL PHENOMENA.

The following article will form a reply to several enquirers.

"The heavens declare the glory of God." In spite of "the fool" having "said in his heart, there is no God," the above statement, which forms the opening words of the 19th Psalm, is an admirable fact, which can be grasped and appreciated by all classes and kinds of God-fearing men and women.

"And the firmament sheweth His handiwork." These words are as true now as they were when they were written by the Sweet Psalmist of Israel hundreds of years ago.

The Psalmist goes on to say: "Day unto day uttereth speech, and night unto night sheweth knowledge." Let us listen to the "speech" uttered, and profit by the "knowledge" shown daily.

"There is no speech nor language where their voice is not heard," yet the heavens speak not in an unknown tongue, nor to any one nation, but the significance of what they declare may be understood by enlightened men of various nationalities; and without the gift or the cultivation of tongues.

"Their line (or rule) is gone out through all the earth, and their words to the end of the world." This shows that the heavenly bodies have influence, power or "rule" all through the earth.

"In them hath he set a tabernacle for the sun." These statements harmonize with the statements made in the beginning of Inspired Writ, viz., that the sun and moon are "two great lights" which were made by the Creator to give light upon the earth—and to rule over the day and over the night, and divide the light from the darkness—and also to be for signs and for seasons and for days and years."
